1. The following is an examiner's statement of reasons for allowance: none of prior art of record taken alone or in combination shows an intermittent-operation control circuit adapted to set the error signal to a substantially zero level during an OFF period of said intermittent operation, gradually increase the error signal upon transition from an OFF state to an ON state; and gradually decrease the error signal upon transition from an ON state to an OFF state, and a logic circuit that operates on the basis of said PWM control signal to generate a first switch signal for turning on said first semiconductor switch; a second switch signal for turning on said second semiconductor switch; a third switch signal for turning on said third semiconductor switch; and a fourth switch signal for turning on said fourth switch in such a way that a first simultaneously OFF period is established during which said first and fourth switches are simultaneously turned off, and a second simultaneously OFF period is established during which said third and second switches are simultaneously turned off, and that the direction of the current flowing through said primary winding is changed from one direction to the other when the magnitude of said current is zero (as recited in claims 1, 2 and 5-7); or

an intermittent-operation control circuit adapted to set the error signal to a substantially zero level during OFF periods of the intermittent operation, gradually increase the error signal upon a transition from an OFF state to an ON state; and gradually decrease the error signal upon a transition from an ON state to an OFF state, and a logic circuit that operates on the basis of said PWM control signal to generate a first switch signal for turning on said first semiconductor switch and a second switch signal for turning on said second semiconductor switch in such a way that a simultaneously OFF period is established during which said first and second switches are simultaneously turned off, and the direction of the current flowing through said

primary winding is changed from one direction to the other when the magnitude of said current is zero (as recited in claims 3 and 4); or

an intermittent-operation control circuit adapted to set the error signal to a substantially zero level during an OFF period of said intermittent operation, gradually increase said error signal upon transition from an OFF state to an ON state, and gradually decrease said error signal upon transition from an ON state to an OFF state; and a switch signal generation logic circuit that operates on the basis of said PWM control signal to generate a first, a second, a third, and a fourth switch signals for respectively turning on said first, second, third, and fourth semiconductor switches, in such a way that a first simultaneously OFF period is established during which said first and fourth switches are simultaneously turned off and a second simultaneously OFF period is established during which said third and second switches are simultaneously turned off, and that the direction of the current flowing through said primary winding is switched from one direction to the other when the magnitude of the current is zero (as recited in claims 8, 9, and 12-16); or

an intermittent-operation control circuit adapted to set the error signal to a substantially zero level during an OFF period of the intermittent operation, gradually increase said error signal upon transition from an OFF state to an ON state, and gradually decrease said error signal upon transition from an ON state to an OFF state; and a switch signal generation logic circuit that operates on the basis of said PWM control signal to generate a first switch signal for turning on said first semiconductor switch and a second switch signal for turning on said second semiconductor switch in such a way that a simultaneously OFF period is established during which said first and second switches are simultaneously turned off and that the direction of the current

flowing through said primary winding is switched from one direction to the other when the magnitude of said current is zero (as recited in claims 10 and 11).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
